

## ETHERLIN WHITEPAPER

June 20, 2023

# WHITE PAPER

## EXECUTIVE SUMMARY

From the dawn of the internet, the surge to continuously improvise and improve is evolving at an alarming rate. The involvement of the roots of the internet in almost every business has been a blessing to the business owners, whether it is Ecommerce or Real Estate, Hospitality or Healthcare, Entertainment or Entrepreneurship; the internet has opened up a barrel of opportunities. But with possibilities come lurking the profanity. With the advancements in technical expertise comes monetary monolithic centralized decision-making institutions. Ever since the financial era of the internet, every occurring transaction is being monitored and sustained by the intermediary sections of financial institutions. These intermediaries are responsible for manipulating the policies and regulations at their will, victimizing the commoner.

The need to abolish this central financial power has given the final push to tip the scale towards decentralization. Birthed by the Peer-to-Peer financial transfer without interfering with intermediaries principles of the "Bitcoin" whitepaper published by pseudonym "Satoshi Nakamoto," Blockchain was developed.

Blockchain is a decentralized digital ledger used to record all the transactions, description, ownership, and authentication regarding all and any item with the attributes to cross-check for the purpose of integrity. Blockchain stores the complete copy of transaction history in every block in the network, proffering immutable and un-hackable factors to its records.

## KRYPTREX CEX

KRYPTREX organization is ready to take on the blockchain world by designing and developing a centralized exchange platform also known as KRYPTREX on the world-renowned Ethereum blockchain. Ether- lin, an official BEP-20 token abbreviated "ETL," will be responsible for pouring in the liquidity to skyrocket the parent company to new and exciting heights.

KRYPTREX is going to milk the best opportunities from Ethereum by evaluating its transaction speed to the maximum by taking advantage of the possibilities of layer 2 solutions. The organization is staring down the barrel of infinite possibilities with the futuristic development plans of NFT Marketplace and a DEX.

## **INTRODUCTION**

The blockchain world is blooming with financial opportunities, but due to its decentral nature, a very low percentage of users use centralized trading platforms. These platforms are presumed to be plagued with misguided policies and regulations to trick the users into trading their assets. A common misconception associated with the CEX is that the whole idea of decentralization is to be relieved from central monolithic governing bodies, then why would anyone be interested in conducting business with them.

KRYPTREX is going to be an integral part of the blockchain universe by implementing and engraving the word "Trust" again by developing their own central exchange ( KRYPTREX ) and is delving deeply into the centralized ecosystem by leveraging the Ethereum composure, utilizing the amazing lightning-fast transaction speed from 2nd layer implementation.

KRYPTREX is taking the challenge head-on by launching their own BEP- 20 token, "ETL," which will provide the Staking utility to token holders to reap the hefty yields. Platformers can perform all the financial related transactions like Buy, Sell, Withdraw, and Stake their heartily desired cryptocurrency. KRYPTREX will not only let the users exchange crypto- to-crypto but fiat-to-crypto and vice versa as well. The company's competency to take the challenges head-on, armed with the most latest technological holdings in the arsenal, will commit to the successful implementation of future proof plans.

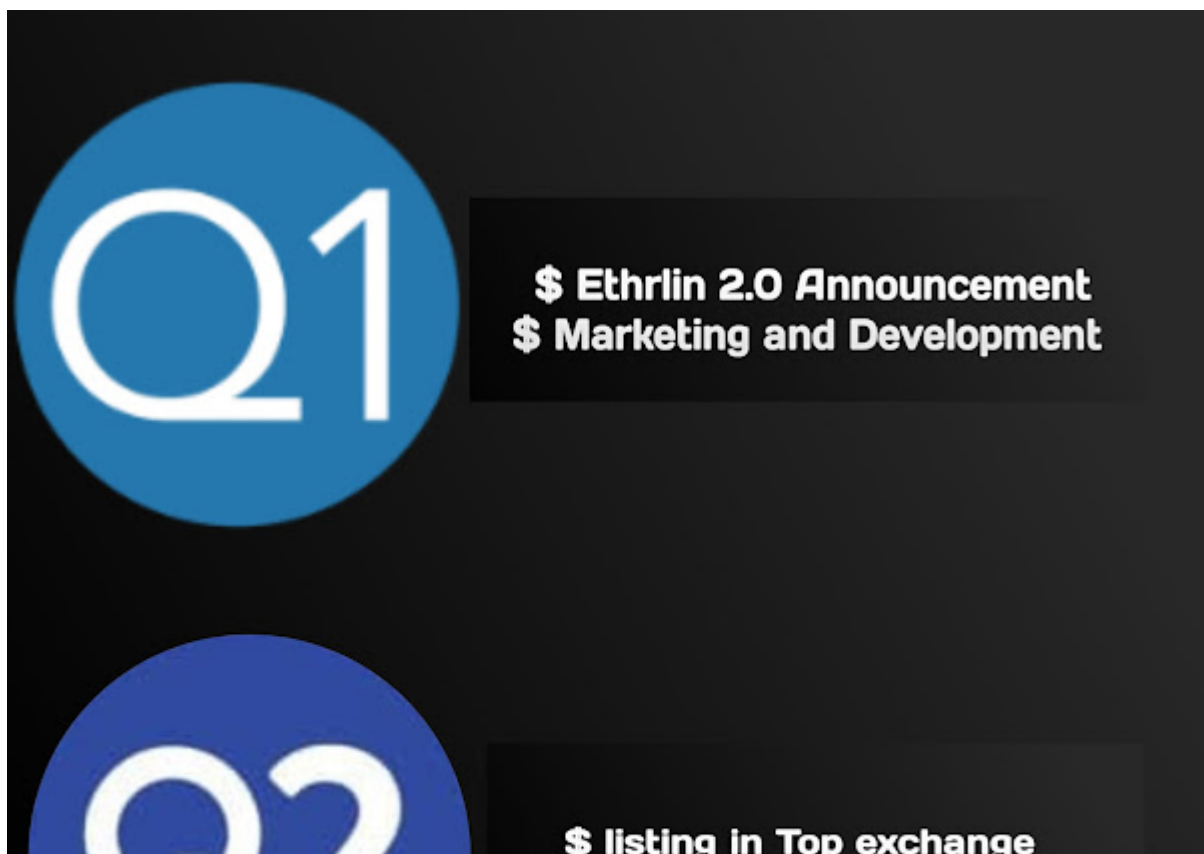

## **MISSION**

KRYPTREX, the conglomerate, has set its sight to entrust the blockchain users in central exchanges by providing the seamless experience in operating their KRYPTREX exchange leveraging the smooth transactions of Ethereum, all while almost triple folding the rewards from yielding.

ETHERLIN The Own Governance Token of "KRYTRX CEX ". The achievements we have been targets are listed below ,

1. Enable seamless experience in trading in our platform and Ensure safe and secured transaction .
2. Building a strong community for both of cex and own Governance Token "ETHERLIN "
3. Etherlin will Listed as TOP 100 Most Traded Cryptocurrency in thge world .
4. Listing in all Centralized and Decentralised exchanges in the world and most trusted crypto with more utility purpose.
5. Etherlin will be not only kryptex cex own governance token . It has a special usecase of buing and selling NFT and metaverse lands using etherlin.
6. Top exchanges like huobi global , binance , phoeniex and so on will be listed.
7. we ensure that we keep on supporting our community and growth of our community . In both large scale and small scale Etherlin will be supported and used as medium of transaction in the crypto world

## **ROAD MAP**

- \$ building community**
- \$ reaching 15000 Holders**

- \$ Introducing kryptx exchange to community**
- \$ NFT Minting**
- \$ Metaverse purchase and knowledge kit**
- \$ Etherlin performance Enhancement**

- \$ Building Ecosystem**
- \$ Blockchain reaserch centre**
- \$ Developer Engagement Programs**
- \$ Reaching 1Lakh + Community**

### **PROBLEMS PLAGUING CEX**

Trades regarding assets on cryptic planes of CEX have been somewhat of a cumulation of

shredded experiences following disbanded liquidity pools along and a laborious process. The problems that are plaguing the centralized trading platforms into the revoking digital footprints are as follows.

## **LIQUIDITY LOOP**

Many investors do not trade on CEX, considering the centralized monarchy resulting in a lack of liquidity. Without fathering the liquidity to boost the token monetization, dormant/eager browsers do not risk buying the token as there is no shelter of return for cash on hand for backing out if anything happens.

## **SECURITY AT STAKE**

Generally, Most of the deployed CEX are not organized, trustworthy, and are hardly reliable. While the expectation bar is constantly inflated to new heights by the new participants in blockchain, the central industry is still pulling itself up from the ill-disposed hacks and applications.

## **HONEY POTS**

Sometimes, the huge collection of funds in the centralized space acts as a honey pot for the potential hackers and exploiters. As more and more investors come pouring in, the frequency of possible attacks will also grow.

## **REGULATIONS AND POLICIES**

There always was somewhat of opacity regarding the rules, regulations, and policies regarding central exchange platforms. Lax security checkpoints are responsible for operating an exchange in high tide. Due to all these reasons, it isn't easy to penetrate the valid exchanges from illusionists.

## **SOLUTION BY KRYPTREX**

KRYPTREX threaded the needle in engraving the trust into platform roamers regarding centralized exchanges.

## **SURPLUS LIQUIDITY BANDS**

The only reason an investor will probably think of investing in anything is due to "Trust." The only explanation for the high liquidity is simply the trust. Due to this resolution, the trading volumes will become high resulting in drenched liquidity hence formulating a bigger pond rather than fragmented pools.

## **NON-CUSTODIAL EXCHANGE**

KRYPTREX is following a latest devised model of a centralized exchange, all while delivering all the permissions back to its consumers by handing back the custody of their private key to exert total

control over their assets.

## **RIGHTFUL POLICIES**

KRYPTREX will be very strict about the policies and rules regarding the documentation of all the transactions carried out on the platform, as well as the regulations about the working of KRYPTREX central exchange, assuring potential consumers of the flexibility and feasibility of the policies according to the situation calls.

## **TRANSPARENCY**

Transparency will be of utmost importance for the CEX deployed by KRYPTREX about the transactions befalling across the platform, policies implemented, documentation about intermediary involvement, and their wish to keep things that way.

## **LATENCY**

Fundamentally, the time a transaction takes to complete a round trip from the crypto wallet to the central server to acknowledging back to the user, this process is known as latency. KRYPTREX exchange servers are dependably ultra-fast that perform duplex communication between bank and customer in a matter of milliseconds. Lower the latency, lower the slippage, and hence take better advantage of market opportunities and not the other way around.

## **KRYPTREX ECOSYSTEM**

KRYPTREX organization's central exchange is compromised of features that will help its users to embark on the set sail to high yields and are proficient enough to stay.

## **KRYPTREX ANALOGY**

KRYPTREX is a conglomerate trailing their first step in the blockchain universe with the table-turning event of the introduction of the centralized exchange also known as KRYPTREX with the native BEP- 20 token known as "ETHRELIN" abbreviated as "ETL" listing on their own central exchange leveraging its fast transaction speed of Upto 15 per second.

## **KRYPTREX DISTINGUISHED FEATURES**

CEX deployed by the KRYPTREX has an abundance of features from which the platform's users can get the benefit and bonuses by utilizing them to their utmost limit.

## **TRADING PLATFORM**

The core product on which KRYPTREX is looking to build its blockchain empire is simply a central exchange with veiled-up features and options, ready to quake the market. The Graphical User Interface of the platform is so straightforward that even an amateur with no blockchain background can easily trade according to their wit. Creating an account on the platform is as easy as play-in-the-hay, consumers just have to have a crypto wallet.

## **LIQUIDITY POND**

The USP of the KRYPTREX exchange is that it is an easy-to-use platform inviting a lot of potential investors, novice as well as entrepreneurs, eventually filling up the liquidity pool. The more the liquidity on the platform, the more will be the trading flow, and hence, Higher will be the digital footprints.

## **CROSS-CHAIN COMPATIBILITY**

ETL, a native token of KRYPTREX, is being developed according to the rising need for cross-platform compatibility. ETL can be used to perform cross-sectional trading across different trading platforms and is not bound to KRYPTREX only. To future-proof the token, KRYPTREX is going to implement some NFT platform utilities to it also.

## **KRYPTREX DISTINGUISHED FEATURES**

KRYPTREX exchange is implementing best-in-the-class security policies and regulations to waive off malicious attackers and hackers. They are simply not boasting on the basis of new rules and secured servers; KRYPTREX has actualized the concept of "ONIONIZE" to lay the playground rules.

## **RIGID RULES**

The trading platform is implanted on the rigid ground of sets of rules. These rules work on the core principle of "Code is Law," and it will not be an easy task for hackers to brute force their way in.

## **FLEXIBLE COUNTER-ACTION PLANS**

The KRYPTREX platform has kept both sides of the coin. Along with the rigidness of laws and rules, Platform developers have kept open to the flexibility to mold the policy paradigm according to the call of the situation.

## **CYBER SECURITY TEAMS**

KRYPTREX has a well-versed group of cyber security experts to keep the platform norms and regulations up to date with the rest of the world. KRYPTREX will onionize the security protocol by implementing security layers over layers to take precautionary measures when the time comes.

## **KRYPTREX TOKEN**

KRYPTREX is stumping towards benchmarking its presence by launching the BEP-20 token along with various aligned utilities, as given below.

## **STAKING**

Primarily, Etherlin has been programmed to have a staking utility. Staking is conducted by locking a sum of ETL into the staking contract for a definite amount of time and towards the end of the contract, Stakeholders are rewarded with coins, tokens, or utilities. Staking is performed to increase the liquidity on the platform which further increases the digital footprint and pour in trade volumes.

## **FLEXIBLE COUNTER-ACTION PLANS**

The KRYPTREX platform has kept both sides of the coin. Along with the rigidness of laws and rules, Platform developers have kept open to the flexibility to mold the policy paradigm according to the call of the situation.

## **CYBER SECURITY TEAMS**

KRYPTREX has a well-versed group of cyber security experts to keep the platform norms and regulations up to date with the rest of the world. KRYPTREX will onionize the security protocol by implementing security layers over layers to take precautionary measures when the time comes.

## **KRYPTREX TOKEN**

KRYPTREX is stumping towards benchmarking its presence by launching the BEP-20 token along with various aligned utilities, as given below.

## **STAKING**

Primarily, Etherlin has been programmed to have a staking utility. Staking is conducted by locking a sum of ETL into the staking contract for a definite amount of time and towards the end of the contract, Stakeholders are rewarded with coins, tokens, or utilities. Staking is performed to increase the liquidity on the platform which further increases the digital footprint and pour in trade volumes.

## **YIELDING**

ETL Stakeholders will be rewarded with reward tokens or coins towards the end of the contract period and rewards investors. These rewards are known as yield rewards. Yield rewards can range from tokens to coins to some utilities which can be redeemed on the platform.

## LOCK-IN PERIOD

A Lock-in period is defined as a particular period of time for which the tokens are staked in the contract. The Lock-in period is the deriving force of the rewards. Greater the lock-in period, greater will be the reward.

## GOVERNANCE

A ETL will advocate and grant the governance rights to the token holders. Governance right is a set of rights granted to the token holders in the form of utilities. ETL holders will be given the following rights but are not limited to:

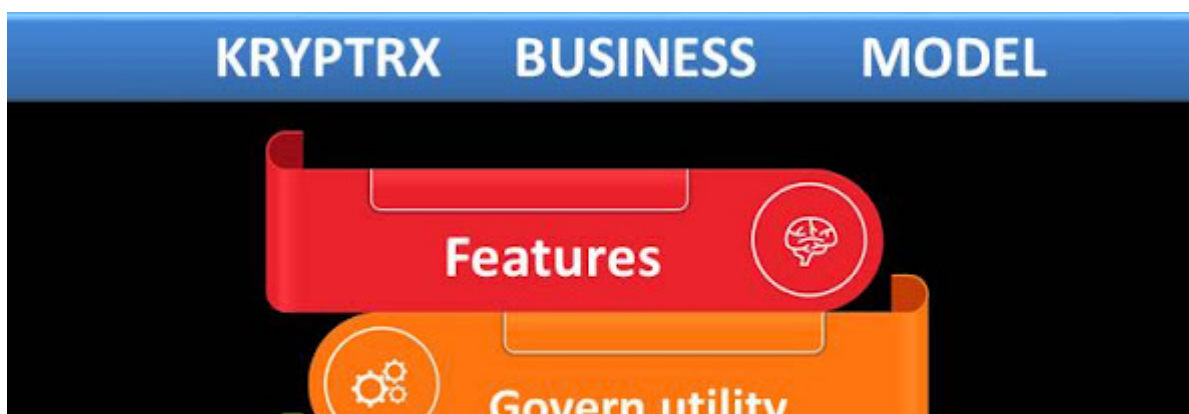

- The right to Vote in the platform matters regarding the introduction of new policies, rules, or even smart contracts.
- Rights to consent like knowledge transfer of new products launched.
- Right to perform roles in making decisions.

## COIN BURN

Coin Burn is a process of deliberately burning or eliminating the coins rendering them to be unusable. KRYPTREX will follow this worldwide accepted method for the following features:

- Coin Regulation in the market
- Introduction of New Coins
- Stability of Coin value
- Low Volatility for coins.

## KRYPTREX BUSINESS MODEL

## INFOGRAPHICS

Ecosystem Benefits:

- Cross asset trading
- Biometric security
- Multiple licenses across different jurisdictions
- High-security wallet
- IOS and Android app
- Prepaid brokerage package
- Airdrops

- Services with a price markdown
- Increase in the interest rate and staking rewards.

## **KRYPTREX SCOPE**

With the far-sighted futuristic developmental plans, KRYPTREX will set the bar high for all the competitors out there.

## **NFT MARKETPLACE DEVELOPMENT**

KRYPTREX is looking forward to drawing out the best of blockchain functionality by divulging it in the NFT sphere. They are going to provide selfless services to the platform users and browsers of creating their own NFTs.

KRYPTREX will be developing an NFT Marketplace platform that will leverage the Ethereum network architecture and can be used to mint any type of collectibles, Physical as well as Digital. With their immutable nature as well as being proof of authenticity and ownership, NFTs are becoming an indispensable part of our day-to-day life. ERC-721 and ERC-1155 will be going to the types of NFTs that can be minted using the platform. The creators will be rewarded with the lifetime of the revenue stream by the royalty clause in the minting process.

## **DECENTRALIZED EXCHANGE**

After the successful development as well as deployment of the centralized trading platform, KRYPTREX will also be looking into the developmental process of decentralized exchange as well. Decentralized exchanges are the blockchain trading platform that allows trade directly between traders without the intervention of a middleman.

KRYPTREX DEX will perform every and all operation through smart contracts on the Ethereum blockchain, which is different from a traditional centralized exchange (CEX). Traders will achieve direct peer-to-peer transactions on the DEX without intermediaries.

This DEX is going to be focusing on the responsibility of providing liquidity for transactions without dominating actual assets, all while protecting users' personal information and transactions.

## **KRYPTREX BUSINESS BENEFITS**

- Due to the cross-chain compatibility of the ETL token, Etherlin will help bridge the gap between different exchanges as it can be used to perform transactions on other platforms disregarding their type.
- As the KRYPTREX platform is going to perform the exchanges between the crypto to crypto as well

as the crypto to fiat, it will allow the users to exchange and trade multiple chain currencies at the palm of their hands.

- As the KRYPTREX being centralized, there are only a handful of competitors left, aiding the market to flourish more and move towards managed profits. As a result, liquidity from the starting stage will go sky high, resulting in a high yield.
- KRYPTREX exerts towards making marketing trades fair. All of these oddities will be turned into brewing truth because of Ethereum's predefined user traffic, which eventually speeds up the trading volume and process.
- Price Prediction for an asset will generally fall into a known range because of the little competition, which will bring price inflation and profitability for the shareholders.
- Introduction of properly documented mediators watching every transaction along with the governing bodies, the KRYPTREX exchange is generally more organized and regulated as compared to other ones.

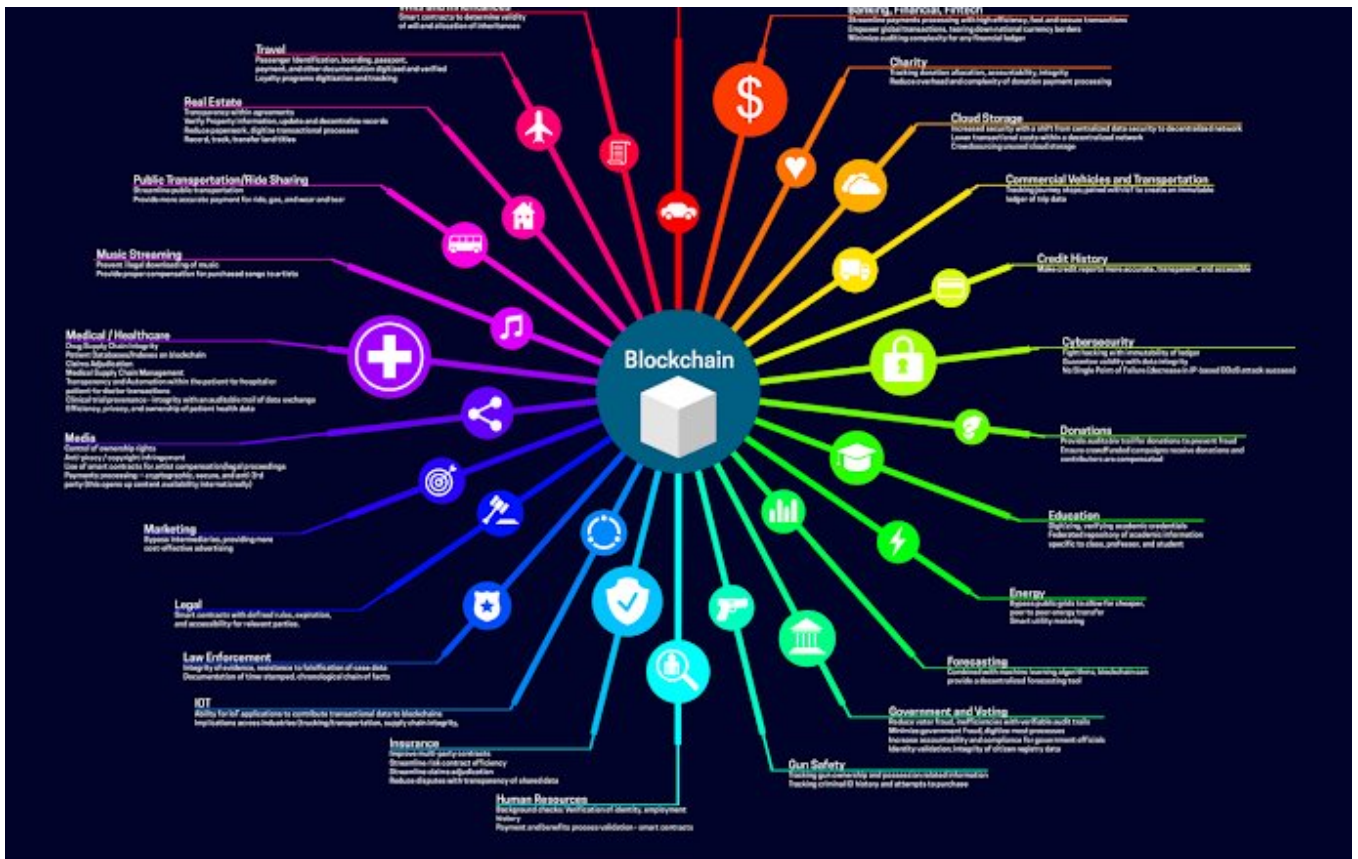

## **TECHNOLOGICAL STACK**

### **BLOCKCHAIN**

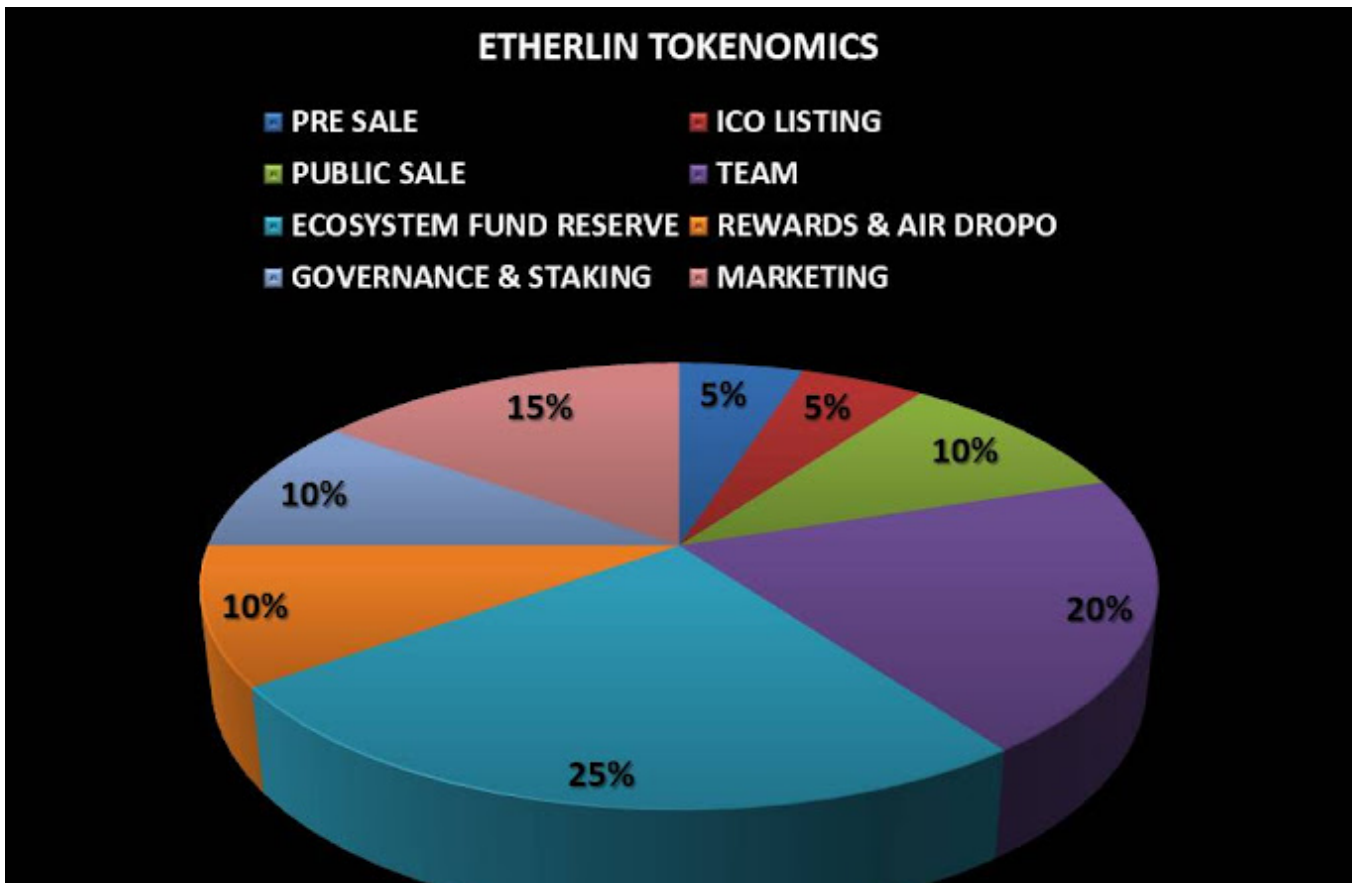

Adhering to the principle of peer-to-peer, non-intervening intermediary transactional protocol, the whitepaper published by pseudonyms " Satoshi Nakamoto " on the cryptocurrency known as "Bitcoin" has given birth to the unanimous "Blockchain." Catch a glimpse of all the points that made us go beyond such a technology.

- Blockchain is an open, decentralized ledger that uses distributed ledger technology to record the data.
- The immutability of the data ledger and its consensus mechanism safeguards the transactions.
- Non-intervention of third parties or middlemen makes it a P2P system.
- Facilitates transparency and integrity of data to its users.
- Faster settlement of transactions when compared to traditional finance systems.

Implementation of blockchain systems is slowly but surely reaching the core of our society's working mechanism. Some of the affected fields are

## TOKENOMICS

|                                 |              |   |
|---------------------------------|--------------|---|
| <b>TOTAL SUPPLY</b>             | 1000,000,000 | THE TOTAL SUPPLY OF ETL WITH WHICH THE KRYPTREX WILL BE COMMENCING THE PARADIGM IS 1 BILLION. |
| <b>PRE-SALE</b>                 | 50,000,000   | PRE-SALE WILL BEGIN WITH A WHOOPING 5 MILLION TOKENS.   |
| <b>ICO LISTING</b>              | 50,000,000   | 5 MILLION WILL BE LISTED FOR THE PRIVATE SALE TO SUPPORT THE ICO EVENT.                       |
| <b>PUBLIC SALE</b>              | 100,000,000  | PUBLIC SALE WILL COMMENCE WITH 10 MIL.  |
| <b>TEAM</b>                     | 200,000,000  | 20 MILLION WILL BE RESERVED FOR THE TEAMS AT KRYPTREX.  |
| <b>ECOSYSTEM FUND RESERVE</b>   | 250,000,000  | 25 MILLION WILL BE ALLOCATED FOR THE ECOSYSTEM OF THE PLATFORM.                               |
| <b>REWARDS &amp; AIRDROP</b>    | 100,000,000  | AIR DROPS WILL HAVE A RESERVE OF 10 MILLION QUOTA.  |
| <b>GOVERNANCE &amp; STAKING</b> | 100,000,000  | REWARDS, INCLUDING STAKING, YIELDING, GOVERNANCE, ETC., WILL RESERVE 10 MILLION TOKENS.       |
|                                 |              | CONTRACT OR FEATURE UPGRADES WILL REQUIRE CAP-  |

MARKETING

150,000,000

ITAL EXPENSE. THEY CAN BE FUNDED FROM THESE 15 MILLION TOKENS.
